

SBImage - document acquisition

Image Scanning is the process of converting text and graphic paper documents, and other files to digital images. This "analog" to "digital" conversion process is required for computer users to be able to view electronic files.

Are you looking for:

- * Scalable solution to scan your document
- * Support for all of the industrial scanners and MFDs
- * Support for image enhancements
- * Barcode and OCR recognition
- * Flexible scanning profiling
- * Pre and post-scan validations
- * Pre and post-scanning document classification
- * Quality & efficient electronic output
- * Support for low and high speed scanning
- * Technical hardware support & maintenance
- * Customized solution for specific scanning needs
- * Out-of-the-box powerful solution
- * Duplex or Simplex scanning

Scan Interface is a software package, which supports a variety of industrial scanners, ranging from small Kodak i40 to high-speed processing monster - Kodak i830.

The application is built to support all features available from the scanner hardware & many more additional software enhancements. Some of the available features are: simplex and duplex scanning, image enhancement facilities, barcode processing, flexible scanning profiling (based on image type and quality), pre- and post-scanning document classification, quality control and various output formats.

The application is designed with a simple, controlled interface, easy navigation and configuration.

Controlled by the configuration file, this package can be deployed in minutes by our support team or your computer specialist, once again, enabling your company to control and preserve valuable information.
