

SBImage - thick client

The thick client front-end, built on leading state-of-art tools kits, provides the access to secure SBImage repository, allows client side image manipulations, distribution and management.

Would you consider an imaging solution without:

- * An easy to navigate user front-end
- * Support for annotations, highlighters and rubber stamps
- * Image manipulations like panning and zooming
- * Flexible document viewer with dual view
- * Direct integration into your mail client, print and fax
- * Support for over 100 different file formats
- * Secure & protected document retrieval environment
- * Flexible indexing interface
- * Data validation on search, index and update
- * OCR and barcode recognition facility
- * Need for direct connectivity to the database and the repository
- * Flexible searching facility

SBImage application suite enables your company to scan and classify paper-based documents using barcode, electronic print recognition or manual classification. Digitizing paper-based documents eliminates the need for manual filing, retrieval and refiling of documents from either onsite or offsite storage facilities. It saves administrative time, storage costs, improves customer satisfaction and provides immediate, shared access to stored documents.

This cost-effective solution is designed to radically improve the way in which your company can respond to day-to-day business requirements. It provides a secure, digital information management solution that enables your employees and customers to collect, store, manage and retrieve electronic documentation, in a structured and secured framework.

The modular approach of the solution allows implementing single user environment and growing the solution to enterprise-wide strength.
